

eGovernance Solution

e-Governance is all about citizens and about Services. Services are meaningful if time bound and Time bound services are possible only by blending Information & communication Technologies (ICT) and Government Process Reengineering. We perceive e-Governance as a 'process' & not as a 'product'. It is a 'paradigm shift' for all the stakeholders i.e. Govt. buyers/users, citizens, facilitators & vendors.

Ascomp Technologies eGovernance solution provides a wonderful application on Integrated Management Information System to integrate all your organization process like File tracking, Complaints management, legal records, and any technical modules.

E-Governance Solutions: Electronic Governance is defined as giving Citizens the choice of when and where they access government information and services. Putting the Citizen at the center of government means better services to citizens with more transparency. This uses more and more of Electronics & Information Technology in many of the government functions.

Why E-Governance:

- To make government more result oriented, efficient and citizen centered
- Enhance good governance characterized by participation, transparency and accountability
- Use of new communication technologies and the Internet provide opportunities to transform the relationship between governments and citizens in a new way contributing to the achievement of good governance goals
- The use of information technology can increase the broad involvement of citizens in the process of governance at all levels by providing the possibility of on-line discussion groups and by enhancing the rapid development and effectiveness of pressure groups
- Advantages for the government , government may provide better service in terms of time, making governance more efficient and more effective
- The transaction costs are lowered and government services become more accessible

Reckoner e-Governance solution is built on n-tier architecture using latest window technologies and is truly web enabled, easy, and secured.

Key features:

- User definable processes
- Tightly controlled access rights at role & user level
- Task flow enabled
- Integrated with MS office using interoperability.
- Requires minimal training on line help is provided at each module level, screen level and field level.
